

Job Opportunity: Analyst

About Whitestein Technologies Whitestein Technologies was founded in January 1999 with the mission to become a leading provider of advanced software agent technologies, products, solutions, and services for selected application domains and industries.

As of today, Whitestein is a team of about 90 qualified and highly skilled employees located in Zurich (Switzerland), Bratislava (Slovakia), Donaueschingen (Germany), with a fourth location being opened in Sophia Antipolis (France).

Whitestein strongly believes that agent-based technologies and agent-oriented software engineering methodologies enable novel, attractive market opportunities for the design and the implementation of a next generation of distributed information systems and network infrastructures, in particular in combination with other leading-edge technologies like web services, mobile computing, grid computing, and pervasive technologies such as RFID smart tags.

Open Position Whitestein Technologies is offering, to a motivated and experienced system and software analyst, to join our Development Center to work on advanced, distributed information systems and products in the logistics, telecommunications, and financial domains.

Your Responsibilities As one of our analysts, you will be responsible for the deep understanding of customer needs, documenting and communicating them as well as cooperating inside of the team during creation of conceptual solutions. You will keep tight contacts with the customer as well as the team throughout the whole project. To be able to effectively analyze the problem and communicate with the customer, you will continuously study the target domain of the project.

Your Qualification **Education**

For this position you need a technical or mathematical university degree.

Knowledge & Experience

Overview of the current technological trends, object-oriented paradigm and good knowledge of UML and modeling tools is strongly required. Furthermore, knowledge in SQL and data modeling is required.

Experience in requirements management, analysis as well as design of object-oriented systems is a firm requirement. Furthermore, you should have the following experience:

- 2+ years of UML modeling and requirements management, practical, project-based experience
- 3+ years of practical experience using object-oriented programming language (C++, Java)
- 1+ years of experience using SQL

Personal Abilities & Skills:

English language both spoken and written is required.

You should also possess:

- Initiative, creativity, strong analytic thinking
- Feeling for the details and ability to distinguish the priorities
- Strong communication skills and excellent documentation skills
- Flexibility and reliability
- Ability to learn new technologies and application domain areas
- Good team-working abilities

Know-how and interest in usability engineering is a plus.

Start Date and Location

Starting date: as soon as possible.

Location: the candidate would usually work in Bratislava.
